PBC

The SAC Population Balance Calculation (PBC) is the formula used to determine if a shelter's population is increasing, decreasing, or staying the same. It simply takes the total outcomes divided by the total intakes for a time period. 100% means the animals are leaving at the exact same rate they are coming in. Below 100% means the population is increasing and above 100% means the population is decreasing.

2019	2020	2021	2022
95.0%	100.0%	94.7%	92.8%
