PBC

The SAC Population Balance Calculation (PBC) is the formula used to determine if a shelter's population is increasing, decreasing, or staying the same. It simply takes the total outcomes divided by the total intakes for a time period. 100% means the animals are leaving at the exact same rate they are coming in. Below 100% means the population is increasing and above 100% means the population is decreasing.

2021	2022
66.3%	89.5%
